PROFESSIONAL SUMMARY

Software Engineer with experience developing full-stack web applications, RESTful APIs, automation solutions, and cloud-deployed systems using Java, Spring Boot, React, Python, and SQL. Experienced in designing scalable backend services, integrating frontend and backend applications, and deploying production workloads across AWS, Render, and Vercel environments. Proven ability to build automation pipelines, optimize application performance, and collaborate across cross-functional teams throughout the software development lifecycle. Strong foundation in software engineering principles, cloud technologies, Linux systems, CI/CD practices, and secure application development.

WORK EXPERIENCE

Gain America INC – New York

June 2025 – Present

Web Developer

- Developed and maintained backend applications using Java, Spring Boot, and RESTful APIs to support scalable web-based business solutions
- Designed and integrated API endpoints, business logic, and database interactions while collaborating with stakeholders to deliver new application features and enhancements
- Built and optimized data processing workflows using Python automation, reducing manual effort and improving operational efficiency across large-scale content management processes
- Architected an AI-powered content pipeline leveraging Python and Gemini APIs to automate processing and enrichment of 15,000+ legacy digital assets, reducing manual content overhead by 90%
- Worked extensively with MySQL, data validation workflows, and application integrations to ensure data consistency, reliability, and system performance
- Automated software delivery processes through CI/CD pipelines using Git, Jenkins, Maven, and Gradle, supporting reliable deployments and streamlined development workflows
- Monitored and troubleshooted Linux-based application environments, performing root cause analysis and resolving production issues to improve system stability and performance
- Collaborated across engineering and business teams to analyze requirements, implement solutions, and support the full software development lifecycle from design through deployment

Heuristics Pharma Perceptions – New York

Jan 2025 – May 2025

Technology Support Associate Intern

- Collaborated with senior software engineers during the development of an enterprise web application, providing security-focused recommendations throughout the software development lifecycle
- Reviewed application workflows, authentication mechanisms, and data handling processes to identify security risks and align implementations with industry best practices and compliance requirements
- Assisted engineering teams in designing secure application architectures by applying principles from NIST, GDPR, HIPAA, and PCI-DSS frameworks
- Participated in application testing, validation, and troubleshooting activities to improve system reliability, functionality, and security prior to production deployment
- Analyzed network traffic, system logs, and application behavior using Linux and TCP/IP fundamentals to support issue investigation and root cause analysis
- Worked closely with cross-functional teams to document technical requirements, security controls, risk mitigation strategies, and development processes using JIRA and Agile workflows
- Contributed to vulnerability assessments and secure software development initiatives, helping engineering teams strengthen application security and reduce potential attack surfaces

PROJECTS

Prince Urban Knot – E-commerce Web Application ([GitHub](#)) – React, Spring Boot, MySQL, REST APIs, JWT, Cloudinary, Docker, Vercel, Render

- Designed and developed a full-stack e-commerce platform using React and Spring Boot, featuring category-based product discovery, dynamic product detail pages, shopping cart functionality, user authentication, and order history management
- Built and consumed RESTful APIs to enable seamless communication between frontend and backend services, supporting scalable product, user, and order management workflows
- Implemented JWT-based authentication and role-based authorization (USER/ADMIN) using Spring Security and React protected routes, with BCrypt password hashing for secure credential management

- Designed a normalized relational data model using MySQL and JPA, including a multi-image product architecture leveraging @ElementCollection and Cloudinary-hosted assets for efficient content delivery
- Developed a bulk product ingestion pipeline using CSV uploads and custom Spring Boot endpoints, automating the import of 122+ products while improving administrative efficiency
- Optimized application performance by redesigning product-loading workflows and implementing category-based API filtering, reducing unnecessary data transfer and improving user experience
- Containerized and deployed backend services using Docker on Render and deployed the React frontend on Vercel, implementing environment-based configuration management and production monitoring for improved reliability

Live Demo: [PrinceUrbanKnot](#)

Phish Guard – Full-Stack Phishing Email Detection System ([GitHub](#)) – React, Spring Boot, Flask, Python, Random Forest, Vercel, Render

- Architected and deployed a distributed full-stack application using React, Spring Boot, and Flask microservices to analyze email content and generate real-time phishing risk assessments
- Designed RESTful service integrations enabling secure communication between Java-based backend services and Python machine learning components in a production cloud environment
- Built a three-tier architecture consisting of a React frontend, Spring Boot API layer, and Flask machine learning service, demonstrating full-stack application design and microservices principles
- Integrated a Random Forest machine learning model to process email content and generate phishing confidence scores through API-driven inference workflows
- Managed end-to-end deployment across cloud-hosted environments, including frontend, backend, and machine learning services, with attention to scalability, maintainability, and operational reliability
- Re-engineered an academic research project into a production-ready software platform by improving application architecture, API design, deployment workflows, and user experience

Live Demo: [PhishGuard](#)

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, TypeScript, SQL, C#, HTML5, CSS3
Frontend Technologies: React.js, Vite, JavaScript (ES6+), TypeScript, HTML5, CSS3, Responsive Web Design
Backend Technologies: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, RESTful APIs, Microservices, JWT Authentication, Hibernate/JPA
Databases: MySQL, PostgreSQL, Oracle, Supabase
Cloud & Deployment: AWS (EC2, S3, IAM, Lambda, CloudWatch), Render, Vercel
DevOps & CI/CD: Git, GitHub, Jenkins, Maven, Gradle, CI/CD Pipelines
Systems & Infrastructure: Linux/Unix, Shell Scripting, System Monitoring, Application Deployment
Tools & Platforms: Postman, JIRA, IntelliJ IDEA, VS Code, MySQL Workbench
Software Engineering Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms, REST API Design, Authentication & Authorization, SDLC, Agile/Scrum

EDUCATION

Pace University Master of Science (MS) in Cyber Security; GPA: 3.84/4.00	September 2023 - May 2025 New York, USA
Fleming College Postgraduate Diploma in Wireless Information Networking	September 2022 - April 2023 Ontario, Canada
Panjab University Bachelor of Science (BS) in Non-Medical	August 2018 - September 2021 Chandigarh, India

CERTIFICATION

Google Cyber Security Professional Certificate	August 2024
• Developed practical experience with Linux, SQL, and Python for automation, scripting, and system administration • Worked with log analysis, monitoring tools, and troubleshooting techniques to improve application reliability and performance • Applied secure software development principles, access control, and risk management concepts in modern computing environments	
CCNA: Introduction to Networks Switching, Routing and Wireless Essentials	April 2023
• Built a strong foundation in TCP/IP, DNS, subnetting, VLANs, NAT, and network communication protocols • Gained hands-on experience troubleshooting connectivity, routing, and infrastructure-related issues across distributed systems • Developed understanding of network architecture, system performance, and secure communication principles used in modern applications
